

Life just got easier!

Quickly Leverage the Integration of Synchro® and ATMS Systems

One of the most expensive and time consuming tasks of developing and updating signal timing plans, just got easier. With enhanced two-way integration between Synchro Signal Timing and Analysis Software and ATMS Central Management System, Traffic Engineers can exchange and modify traffic patterns, ring sequences, alternate tables, overlaps, split tables and other parameters, dramatically improving convenience working between platforms. Visit www.Trafficware.com or call 281-269-6512.

ATMS

Central Management Platform

Two-way integration between ATMS and Synchro enables users to directly exchange signal timing data

Synchro® 10
