

FEATURES & CAPABILITIES

The Chronomax Pager System Software allows an ordinary personal computer to utilize the existing pager infrastructure and a pager module to enable the user to conveniently update time clock schedules, or override the schedule for emergency situations. Via the pager system, all four Chronomax exception databases, the schedule database, and the alternate plan schedule may be downloaded. The user can also manually override the schedule and send remote override commands.

SPECIFICATIONS

BACKWARDS COMPATIBLE

All Chronomax units ever manufactured may be made 'pager ready' by a software change

ONCE A YEAR PAGING

Since the system utilizes a complete time switch, all holiday entries and days of operation may be entered and the complete database downloaded once
