

A close-up photograph of a person's hand holding a black, cylindrical wireless in-road sensor. The sensor has a textured, ribbed exterior and a flat top surface. The hand is positioned directly above a circular hole that has been drilled into a dark asphalt surface. The background is a plain, light-colored wall, creating a high-contrast scene.

**NO REPEATERS.
NO ISSUES.
NO KIDDING.**

Trafficware introduces a wireless in-road sensor that is reliable, easy to install and easy to maintain. With industry-leading battery capacity it installs in minutes, but lasts for years. Its superior communications technology gives more power and flexibility for installations – and no pesky repeaters.
